

Postdoc Candidates Invited to Join Yao Chen's Laboratory at HHMI's Janelia Research Campus (starting in 2018)

- Aims to bridge molecular and systems neuroscience
- By examining and perturbing features of molecular signals (e.g. enzymes, 2nd messengers):
 - What are their cellular and subcellular locations?
 - What are their temporal dynamics?
 - How do these features affect cellular physiology and animal behavior?
- To understand neuromodulator action, learning, and sleep
- In brain slices and behaving mice

Interested candidates should email <cheny@janelia.hhmi.org>. Encouraged to make contact while at the MBL for an informal meeting.
